

APPENDIX B

In the Claims

5 What is claimed is:

Claims 1-48 (Cancelled).

Claim 49 (New): A device capable of holding a plurality of items, comprising:

 a first substantially planar member;

 a second substantially planar member substantially adjacent to said first

10 substantially planar member;

 located between said first and second substantially planar, substantially adjacent members,

 a central hub therebetween having cruciform ribs situated at 90-degree right angles

 in perpendicular relation to each other and extending radially from said central hub,

 which define a frictional mounting space.

15 50 (New): A device capable of holding a plurality of items for display, comprising:

 a first substantially planar member having a front and a back surface;

 a second substantially planar member having a front and a back surface;

 on a surface of at least one planar member, at least two substantially straight,

 smooth and linear, raised, co-planar ribs having a pre-determined thickness

20 and lying at 90-degree right angles in perpendicular relation to each other,

 thereby forming a cross-shaped configuration having a central hub and

 extending radially outward therefrom;

 means for joining said first and second substantially planar members wherein

 said substantially straight and smooth, linear, raised, co-planar ribs are located

there-between, thereby defining multiple spatial cavities suitable for the introduction
thereinto of at least one display item, and so that an interiorly directed pressure
between said first and second substantially planar members is exerted on
said at least one display item therein.

5 Claim 51 (New): The device capable of holding a plurality of items for display according to claim 50,
wherein:

a first substantially planar member is made of plastic;

a second substantially planar member is made of plastic;

said substantially straight, smooth and linear, raised, co-planar ribs are integrally molded

10 into at least one substantially planar member;

means for joining said first and second substantially planar members is sonic welding;

means for the exertion of an interiorly directed pressure between said first and second

substantially planar members is a gradient surface having the exterior edge of at

least one substantially planar member forming the lower edge of the gradient, wherein

15 said surface is positioned to form part of the interior of said defined spatial cavity.

Claim 52 (New): The device capable of holding a plurality of items for display according to claim 50,
wherein:

said means for joining said first and second substantially planar members is glue.

Claim 53 (New): The device capable of holding a plurality of items for display according to claim 50,
20 wherein:

said means for the exertion of an interiorly directed pressure between said first and second

substantially planar members is a textured, friction-imparting surface.

Claim 54 (New): The device capable of holding a plurality of items for display according to claim 50, wherein:

said means for the exertion of an interiorly directed pressure between said first and
second substantially planar members is at least a shim for insertion into
5 said defined spatial cavity.

Claim 55 (New): The device capable of holding a plurality of items for display according to claim 50, wherein:

said first substantially planar member is made of translucent plastic;

said second substantially planar member is made of plastic;

10 said central hub has a hole;

said opposite surface to that having said at least two substantially straight, smooth and linear,
raised, co-planar ribs has a magnetic element.

Claim 56 (New): The device capable of holding a plurality of items for display according to claim 50, wherein:

15 a first substantially planar member is made of plastic;

a second substantially planar member is made of plastic;

said substantially straight, smooth and linear, raised co-planar ribs are separate,

from said first and second substantially planar members;

means for joining said first and second substantially planar members is sonic welding;

20 said central hub has a hole;

means for the exertion of an interiorly directed pressure between said first and second

substantially planar members is an at least partial texturing of the plastic surface

on at least one substantially planar member, wherein said surface is positioned

to form part of the interior of said defined spatial cavity.

Claim 57 (New): The device capable of holding a plurality of items for display according to claim 53, wherein:

said means for joining said first and second substantially planar members is glue.

5 Claim 58 (New): The device capable of holding a plurality of items for display according to claim 53, wherein:

a first substantially planar member is made of translucent plastic;

a second substantially planar member is made of plastic.

Claim 59 (New): A device capable of holding a plurality of items, comprising:

10 a first substantially planar member;

a second substantially planar member substantially adjacent to said first

substantially planar member;

located between said first and second substantially planar, substantially adjacent members

thereby defining a frictional mounting space, cruciform ribs situated at

15 90-degree right angles in perpendicular relation to each other and positioned

substantially perpendicular to the border edges of said first and second

substantially planar members.

Claim 60 (New): A device capable of holding a plurality of items for display, comprising:

a substantially planar member having a front and a back surface;

20 on a surface of said substantially planar member, at least two substantially straight,

smooth and linear, raised, co-planar ribs having a pre-determined thickness

and lying at 90-degree right angles in perpendicular relation to each other,

thereby forming a cross-shaped configuration having a central hub and

extending radially outward therefrom, thereby defining a plurality of sections;

means for maintaining substantially adjacent contact between said at least one substantially planar display item, and said surface of said substantially planar member having said at least two substantially straight, smooth and linear, raised, co-planar ribs.

5 Claim 61 (New): The device capable of holding a plurality of items for display according to claim 60, wherein:

said means for maintaining substantially adjacent contact between said at least one substantially planar display item and said surface of said substantially planar member having said at least two substantially straight, smooth and linear, raised, co-planar ribs is
10 glue.

Claim 62 (New): The device capable of holding a plurality of items for display according to claim 61, wherein:

said glue permits the impermanent re-positionability of said at least one substantially planar display item.

15 Claim 63 (New): The device capable of holding a plurality of items for display according to claim 62 wherein:

said re-positionable glue is positioned on said plurality of sections located on said surface of said substantially planar member having said at least two substantially straight, smooth and linear, raised, co-planar ribs.

20 Claim 64 (New): The device capable of holding a plurality of items for display according to claim 63 wherein:

said re-positionable glue is covered by a covering material to preserve the efficacy of said re-positionable glue until such time as use is effected.

Claim 65 (New): The device capable of holding a plurality of items for display according to claim 64,
wherein:

said means for positioning at least one substantially planar display item is re-positionable glue
located on fold-back flaps affixed to the alternate surface of said substantially planar
5 member having said at least two substantially straight, smooth and linear, raised, co-
planar ribs.

Claim 66 (New): A device capable of holding a plurality of items for display, comprising:

a substantially planar member having a front and a back surface;

on a surface of said substantially planar member, at least two substantially straight,

10 smooth and linear, raised, co-planar ribs having a pre-determined thickness
and lying at 90-degree right angles in perpendicular relation to each other,
and positioned substantially perpendicular to the border edges of said first
and second substantially planar members.

means for maintaining substantially adjacent contact between said at least one substantially

15 planar display item, and said substantially planar member.
